

First steps with the *LimeSurvey Revolution* Template

English, Version 1.3+:

Thank you for using *LimeSurvey Revolution*. Following you'll find some instructions how to install and use the template. Furthermore we'll guide you through some options and settings. If you'll have further questions, please ask them at our form. You'll find it after your login on our website. We already sent your login information after your purchase: <http://lime.kw-blog.de>

I. Install the Template

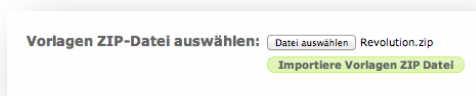

1. Go to the administration panel of LimeSurvey and follow the icon which brings you to the „template editor“.

2. There pleas klick on the icon to import a new template.

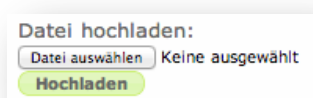

3. Choose the file „Revolution.zip“, which you'll find in the folder you extracted before.

4. Klick on „import ZIP file“ to upload the template. It will get extracted automatically and you'll see a notification of it's success.

5. Scroll down to the end of the page and klick on the link there. It will redirect you to the template editor where we have to upload another two files, which were filtered out by LimeSurvey.

On the right hand side of the editor you can find an option to upload another file. Please choose one by one of the following files

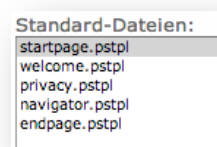

- template.js
- imagetick_lime_2.js

and press „upload“. Those files you'll find in the same directory as this guide within the subfolder „upload“.

6. Congratulations. The template is installed now. If you face any problems please contact the support forum.

II. Customizing the template

After the installation of the template you'll find yourself already in the template editor of LimeSurvey. Here you're able to make some customizations. Please have a look to the template files on the left of the editor and choose the following once to edit them.

1. Customizing: startpage.pstpl

- **Logo:** Search for the following lines of code to change the URL to your logo:

```
<div class="col-md-9"></div>
```

If you want to upload your logo you might use the same way as you uploaded the two missing files of the template before. In this case you'll have to delete „images/“ in the line, because you uploaded image will be saved in the main folder and not in the subdirectory „images“. Furthermore please edit the filename which was originally „ls-siegel.png“.

- **Seal:** If you want to choose a seal we recommend to give it 70% of the color strength which you're using for the background.
Please find the following line to use another image file and edit it as you did before with the logo:

```
background-image: url({TEMPLATEURL}images/ls-siegel.png);
```

If you don't want to use a seal you might delete the following lines:

```
<!-- If you want to change the background-image of the header -->
<style type="text/css">
  .jumbotron {
    background-image: url({TEMPLATEURL}images/ls-siegel.png);
  }
</style>
<!-- background-image end -->
```

- **Bootstrap:** The template is using a CDN-server to fasten the loading time. So the style sheet of the template is saved on another server. If you want to use the template in an offline environment you have to make following customization to load it locally. Please search for the following line:

```
<!-- Bootstrap core CSS -->
<link href="//netdna.bootstrapcdn.com/bootstrap/3.0.0/css/bootstrap.min.css" rel="stylesheet">
```

And edit it like this:

```
<!-- Bootstrap core CSS -->
<link href="{TEMPLATEURL}assets/bootstrap/css/bootstrap.min.css" rel="stylesheet">
```

- **jQuery:** The jQuery library gets loaded from a CDN as well. If you want to load it locally, please search for the following lines:

```
<!-- jQuery Library -->
<script src="//ajax.googleapis.com/ajax/libs/jquery/1.11.1/jquery.min.js"></script>
```

And edit it like this:

```
<!-- jQuery Library -->  
<script src="{TEMPLATEURL}assets/jquery/jquery.min.js"></script>
```

2. Customizing: endpage.pstpl

Footer-Text: You might edit the text which is shown in the footer. Search for the following line of code and customize it as you like:

```
<!-- If you want to change the footer text -->  
<p>© <script>document.write(new Date().getFullYear())</script> LimeTemplates</p>  
<!-- footer text end -->
```

3. Customizing: template.css

If you're familiar with CSS you might use your skills to do edit the template however you like. Here we'll just explain how to change the colors.

- **Primary color:** This color is used for the background of the header and the border around the content. If you want to change it please find the following lines and replace the old color-code (#558AB4) with the one you would like to use:

```
.panel-primary, .panel-primary>.panel-heading, .jumbotron {  
border-color: #558AB4 !important; /* Edit to fit your main color */  
background-color: #558AB4 !important; /* Edit to fit your main color */  
}
```

- **Header font color:** If you changed the color in the previous step and the white font color doesn't match, you might change the font color within this line:

```
color: white !important; /* Color of text in your header */
```

- **Space of the seal:** If you don't use a seal And you don't like the left space within the header, you might delete the following line:

```
margin-left: 25%; /* Delete this line if you don't need a space on the left at your header */
```
